# BTI360 SUMMER INTERNSHIP
Crafting Software. Developing People.

Are you ready to put your technical skills and knowledge into practice? Then BTI360's College Hire Program is for you. **Get a head start on your professional career and gain valuable, hands-on experience through our paid, summer internship program.**

You'll Code From Day 1

Not all internships are the same. You'll be in the thick of it (no menial tasks or writing throw-away code here!), working with your fellow interns to develop a web application that addresses a current need and will be used regularly.

Not Your Average Internship

There's nothing better than hands-on experience. But, we'll take it a few steps further. We'll not only focus on your professional development as an engineer, but also your personal development.

Gain Real-World Experience

Expand your software development skills through our unique combination of practical, hands-on experience and mentoring from our current teammates.

Code as a Team

Software development is a team sport. That's why we work hard to create a high performance team environment — so you can build great software from start to finish.

Work + Play Together

We know what it takes to get the job done. We also believe in the need for fun, so we make sure we take time to kick back and relax.
